

Information Management/ IT

Fremantle GP Network can assist practices with the following Information Management components:

Clinical Software

There are various types of clinical software used in general practice. Some of the more common software used at Fremantle GP Network include Medical Director, MedTech 32 and Plexus.

Clinical Software allows practices to record all of the following with minimal typing:

- Past medical history
- Immunisations
- Develop and use templates for all referrals
- Electronic pathology and radiology results
- Electronic prescribing (with or without interaction warnings)
- Written consultation notes, and
- Registers & Recalls

Fremantle GP Network Support

Practices have access to computer support from Fremantle GP Network staff. Practice visits are offered for assistance with the following:

- Patient records
- Electronic prescribing
- Using software tools e.g. blood pressure monitor
- Registers and recalls systems
- Selected billing and script writing packages
- Creating templates for letter writing and referrals
- Data Extraction Tool

Regular information and updates are provided through the Divisional Publications - Clipboard and weekly news.
